

Da Long

837 University Village, Salt Lake City, UT 84108

385-418-7953, u1368737@utah.edu, long-da.github.io

EDUCATION	<p>The University of Utah, Salt Lake City, UT <i>Ph.D. in Computer Science, GPA: 3.89, Expected: 06/2026, Advisor: Shandian Zhe</i></p> <p>The University of Arizona, Tucson, AZ <i>B.S. in Computer Science, GPA: 4.0, 12/2020</i> <i>B.S. in Mathematics, GPA: 4.0, 12/2020</i></p>
WORK EXPERIENCE	<p><i>Machine Learning Engineer Intern at DoorDash</i>, Sunnyvale, CA, 05/2025 – 08/2025</p> <ul style="list-style-type: none">• Built and deployed homepage ranking models using transformers, multi-gate mixture-of-experts (MMoE), and semantic representations of merchants and consumers with LLMs to model short- and long-term consumer behaviors for improved personalization and engagement.• Delivered a substantial lift in gross merchandise value (GMV) and improved order and retention rates, as verified by a 4-week A/B test; architectures were later adopted by other teams. <p><i>Research Scientist Intern at Meta</i>, Menlo Park, CA, 05/2024 – 08/2024</p> <ul style="list-style-type: none">• Fine-tuned Meta’s generative recommendation model (HSTU) with reinforcement learning algorithms (DQN, A2C) to optimize long-term user satisfaction and engagement. <p><i>Student Researcher at Lawrence Berkeley Laboratory</i>, Berkeley, CA, 09/2024 – 12/2024</p> <ul style="list-style-type: none">• Designed a hierarchical spatio-temporal Fourier Transformer for spectral and multi-scale modeling of complex dynamical systems (e.g., climate evolution), followed by a flow matching block for refinement.• Improved long-horizon stability and accuracy while providing calibrated uncertainty estimates. <p><i>Research Assistant at The University of Utah</i>, Salt Lake City, UT, 08/2021 – Present</p> <ul style="list-style-type: none">• Conducted research on probabilistic and generative modeling, developing transformer-, diffusion-, and Gaussian process-based surrogates for complex physical dynamics.• Developed LLM systems with customized post-training alignment techniques (SFT, DPO), synthetic data generation pipelines, and reward function design for personalized healthcare coaching and recommendations.
SELECTED PROJECTS	<p>LLM-Based Systems for Personalized Healthcare Coaching and Recommendations</p> <ul style="list-style-type: none">• Developed an LLM-based framework for personalized healthcare recommendations and coaching by post-training LLMs on synthetic and curated real-world coaching conversations, using supervised fine-tuning and customized RL algorithms.• Aligned the model with healthcare coaching guidelines, validated it through expert assessments, and launched a web app to capture user feedback and iteratively improve model behavior. <p>Arbitrarily-Conditioned Multi-Functional Diffusion for Multi-Physics Emulation</p> <ul style="list-style-type: none">• Developed a flexible diffusion model-based framework for multivariate dynamical systems.• Within a single unified model, the framework was designed to simulate diverse physical processes and address arbitrary conditional tasks. <p>Physics-Informed Gaussian Process for Surrogate Modeling</p> <ul style="list-style-type: none">• Developed a physics-informed Gaussian process framework that incorporates physics knowledge (PDEs), while quantifying uncertainties for forecasting and interpolation.
SKILLS	<p>Technical: LLM Post-training, Recommendation Algorithms, Reinforcement Learning, Transformers, Gaussian Processes, Diffusion Models</p> <p>Tools & Frameworks: PyTorch, Hugging Face, DeepSpeed, Ray, Databricks, Snowflake</p> <p>Programming Languages: Python (Pandas, Scikit-learn, NumPy), JAX, MATLAB</p>

RESEARCH LLM Alignment, Recommendation Systems, Probabilistic Modeling, Surrogate Modeling,
INTERESTS Reinforcement Learning
